Professional Experience

Ground Systems Software Engineer(await. TS/SCI), RTX **Dec 2023 – Present**
Java, SpringBoot, Docker, Kubernetes, AWS, REST, Gradle *Denver, CO*

- Mentoring/developing team members, enforcing company policies, and overseeing time approval as Section Lead.
- Collaborated with peers on learning/development plans and experiment through building APIs while awaiting access.
- Completed 'Writing Successful Requirements' course to better craft comprehensive project specifications.
- Actively working comprehensive Java development curriculum, complementing mission management and C2 software.

Full-Stack Software Engineer, USAA **May 2021 – Dec. 2023**
Java, SpringBoot, Kafka, React.js Node.js, Docker, AWS, OCP, Hibernate/JPA, DB2 *Phoenix, AZ*

- Developed and maintained event-driven P&C Insurance Communications System Java APIs and Kafka streams.
- Reduced toil of O&M availability teams by building resources to reconcile reinstated communication packets.
- Identified & triaged on–call production issues/defects during and after code deployments.
- Mentored, guided and developed features for interns on Java API development, Agile methodologies and SDLC.

Teacher, Microsoft TEALS **Oct. 2020 – May 2021**
Mentorship, Education, Python, CS Foundations *Tucson, AZ*

- Educated high school students in computational thinking, problem solving, coding, and computer science concepts.
- Provided a hands–on learning in which students' learn through discovery, experimentation, and application.

Software Engineer, Lunar & Planetary Laboratory **May 2019 – Jan. 2020**
Python, C, Remote Sensing, Simulation, Analysis, Research *Tucson, AZ*

- Developed/maintained simulation software utilizing air/spaceborn sounding radargrams to assist planetary investigation.
- Collaborated in the analysis of remote sensing data to better understand debris covered glaciers on Mars and Earth.
- Provided requirements analysis to shape the roadmap to the needs of research specialists.

Infantry Fireteam Leader, U.S. Army, 82nd Airborne Division **Jan. 2015 – May 2018**
Leadership, Employee Development, Resource Management, Risk Analysis, Planning *Fort Bragg, NC*

- Executed the planning/assessment of training exercises in high pressure, fast moving, dynamic and ambiguous scenarios.
- Led 2–4 man fireteams in airborne/combat operations across austere environments(Afghanistan, Jun. 2017 – Mar. 2018).

Projects

Production Support Tool, *Java, SpringBoot, React.js, SQL, Docker, AWS/OCP* **Jun. 2023**

- Designed/built Java APIs with a React web app interface that provides accessibility, and streamlines manual tasks.
- Implemented an event listener to provide oversight and accountability on users executing data modifications.
- Leverages Hazelcast for distributed in-memory caching to improve latency, flexibility, and manageability.
- Built out a ServiceNow service to facilitate governance when modifying production data with a resource.

Surface Clutter Simulator, *Python, C, numpy, gdal, cTypes* **Jan. 2020**

- Generates two-dimensional left/right-side(of the spacecraft) cluttergram images, each containing surface reflections.
- Leverages digital surface models, geographic, geometric and ionospheric properties sourced from NASA's PDS as inputs.
- Increases confidence that interpreted subsurface features in radargrams are not a product of surface topography.

Education

Bachelor of Science in Computer Science, *University of Arizona* **Dec. 2021**
Project Management Certification, *Google* **Jun. 2023**

Skills

Languages: Java, Python, Javascript, HTML, CSS, SQL, C
Frameworks: SpringBoot, React.js, Kafka, JUnit, Jest, Pitest, JPA/Hibernate, IBM DB2/Optim
Tools: Docker, Kubernetes, AWS, Git/GitLab, Gradle, Helm, Postman, OpensShift, ElasticSearch, Grafana
